Turkish Journal of Endocrinology and Metabolism

JOURNAL OF THE SOCIETY OF ENDOCRINOLOGY AND METABOLISM OF TURKEY

EDITORIAL

Dear Colleagues,

We are witnessing a new term for TURK-JEM. Most scholars know that this journal functions under a committee for The Society of Endocrinology and Metabolism of Turkey. Elections completed in fall of 2012 set up new targets for the Society as whole and new areas of focus for TURK-JEM itself. New priorities and holistic approach to Endocrinology and Metabolism issues of the present will be the key strategy for the new term. The top contribution of TURK-JEM is in the area of clinical and experimental endocrinology and metabolism diseases with a special focus on the new contributions in the field. Apart from being a scholarly accepted journal, this publication also serve as a mean of communication medium among scientists in the field. We as a Journal are proud of opening new collaboration areas among scholars through interdisciplinary approaches and creating opportunities of team work which is most desired in the academic world. Journal also serves as a communication tool for Endocrinology and Metabolism scholars to reflect their scientific contribution to the rest of the world.

For this issue you will find topics like; "NAFLD in normolipidemic patients with 1 hour Hyperglycemia", "Vitamin D and Diabetes Mellitus","Macroorchidism in a Patient with FSH-Oma" "Atypical presentation of Paget's Disease of bone"," Papillary carcinoma incidentally found in Graves Disease", "Inappropriate TSH Syndrome". The focus topics are quite parallel with the ongoing literature around the world in the field of Endocrinology and Metabolism.

I once more would like to thank to all contributors, to our previous editorial board members and a warm welcome for the new comers. Please keep in mind that we are a multilingual journal; we welcome and encourage publications in English and Turkish. With the realm this journals expectation Turk JEM is a publication seeking for unique, original and promising studies which should be thanked, recognized and regarded by our previous authors. As editor in chief I would like to remember these scholars once again in their dedication and service to the field of Endocrinology and Metabolism.

With my highest regards,

Nilgün Başkal
Editor-in-Chief
